

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application. Please cancel claims 2-3 and 5-8 without prejudice and amend claims 1, 4 and 9 as follows:

LISTING OF CLAIMS:

1. (Currently Amended) An organic electroluminescence display device comprising:

- a substrate;
- a first electrode formed on the substrate;
- a first organic electroluminescence layer provided on an upper layer of the first electrode;
- a second electrode provided on the first organic electroluminescence layer;
- a second organic electroluminescence layer provided on the second electrode; and
- a third electrode provided on the second electroluminescence layer,

wherein the first, second and third electrodes [[have]] act as an anode and a cathode formed alternately, wherein a fourth electrode for transmitting electroluminescence emitted light is a transparent electrode made of a metal film which is formed of an alkaline metal or an alkaline earth metal, metal fluorides, metal oxides or an alloy of these metals and another metal, wherein the fourth electrode is provided on a boundary between the electrodes which are cathodes and the organic electroluminescence layer.

Claim 2. (Canceled)

Claim 3. (Canceled)

4. (Currently Amended) ~~[[*]]~~An information terminal comprising the organic EL display device according to claim 1.

5. (Canceled)

6. (Canceled)

7. (Canceled)

8. (Canceled)

9. (Currently Amended) An organic electroluminescence display device comprising:

a substrate;

a first electrode formed on the substrate;

a first organic electroluminescence layer provided on an upper layer of the first electrode;

a second electrode provided on the first organic electroluminescence layer;

a second organic electroluminescence layer provided on the second electrode; and

a third electrode provided on the second electrode,

wherein odd-numbered electrodes which are provided are connected to a first electrode terminal and even-numbered electrodes which are provided are connected to a second electrode terminal,

wherein [[an]] a fourth electrode for transmitting electroluminescence light emitted is a transparent electrode made of [[a]] a metal film which is formed of an alkaline metal or an alkaline earth metal, metal fluorides, metal oxides or an alloy of these metals and [[b]] another [[metal]] metal, wherein the fourth electrode is provided on a boundary between the electrodes which are cathodes and the organic electroluminescence layer.

10. (Previously Presented) An information terminal comprising the organic EL display device according to claim 9.
